

Pre - Treatment Solutions

PHOS - PREP 971T . PHOS - PREP 920 . LEAN COAT 400

Pre - Treatment Solutions introduces their “NANO” technology processes.

PHOS - PREP 971T, PHOS - PREP 920 and GALAXY LEAN COAT 400 all provide a thin, “nanometer range”, conversion coating on steel, galvanised steel and aluminum substrates. This latest advancement in pretreatment processes has been proven to be a viable alternative for conventional iron phosphate programs. Energy and labour savings have continually been enjoyed with these environmentally friendly products. Consider these innovative products for your pretreatment solution.

Process Advantages:

- Little or no sludge resulting in lower maintenance costs
- Operates at lower temperatures
- Components are biodegradable
- Multi-metal effective pretreatment
- No regulated heavy metals
- Operates with a minimum of 3 Stages
- Runs at reduced concentrations compared to traditional processes
- Complies with environmental legislation

Process Advantages:

- Dramatically increases the bonding area for powder coating
- Provides corrosion performance that meets typical finishing specifications
- Comparable Salt Spray in comparison to traditional Iron Phosphates (up to 1000 hours on Steel; 3000 hours on Aluminum)
